

# Quick Installation Guide

## Wireless Wall Plate Access Point

### Setup with videos

Scan QR code or visit <https://www.tp-link.com/support/setup-video/>

Note: The image may differ from the actual product.

## 1 Hardware Overview

### Front Panel

### LED/Wi-Fi Button

When the EAP is working in Standalone Mode and enabled with Wi-Fi Control, press the button to turn on/off both the Wi-Fi and LED. In the other cases, press the button to turn on/off the LED only.

### LAN Port

A wired device can be connected to the LAN port via an Ethernet cable and access the network.

### RESET

With the EAP powered on, press and hold the button for about 5 seconds until the LED flashes, then release the button. The EAP will restore to factory default settings.

### LED Indicator

On: Working normally/Initializing.

Off: Working abnormally/Power off/LED is turned off.

Flashing:

- Initialization: The LED flashes twice after initialization is completed.
- Upgrade: The LED flashes once per second while upgrading.
- Reset: The LED flashes quickly during the reset. The EAP will then reboot.
- Locate: When the Locate feature is activated in the Omada controller, the LED flashes quickly to locate and identify the device. The LED will flash for 10 minutes, or you can disable the feature manually to stop it flashing.

### Rear Panel

### UPLINK+PoE Port

Connected to a PSE (Power Sourcing Equipment), such as a PoE switch, for both data transmission and Power. The PSE supports 802.3af/at inputs and complies with PS2(IEC/EN 62368-1) or Limited Power Source(LPS) (IEC/EN 60950-1).

## 2 Pre-Installation Checklist

Before installation, be sure that you have the following items:

- A pre-installed wall junction box
- A Phillips screwdriver
- An RJ45 plug
- A PoE switch
- A triangular screwdriver

## 3 Installation Steps

Note: For simplicity, we will take EAP230-Wall for example throughout the Guide.

The EAP can be mounted into a wall junction box. The junction box should be pre-installed with a running-in-wall Ethernet cable connected to a PoE switch.

1. Detach the faceplate of the junction box with a Phillips screwdriver (demonstrated with an 86 mm wall junction box).

2. Detach the faceplate of the EAP with a screwdriver.

3. Connect the Ethernet cable inside the junction box to an RJ45 plug. Then connect the cable to the UPLINK+PoE port. Position the Ethernet cable to ensure it is not strained.

4. Insert the enclosed screws and tighten them with a triangular screwdriver to secure the mounting bracket.

5. Press the faceplate of the EAP back into position.

## 4 Software Configuration

Choose from the following methods to set up your EAPs:

- **Method 1: Standalone Mode**

To configure and manage EAPs separately (Convenient for a small network with only a few devices)

- **Method 2: Controller Mode**

To configure and manage EAPs in batches on a central platform, namely Omada Controller

### Method 1: Standalone Mode

**Note:**

- Before you start, be sure to power up and connect your devices according to the topology figure.
- A DHCP server (typically a router with DHCP function enabled) is required to assign IP addresses to the EAPs and clients in your local network.

#### Via Omada App

1. Download the TP-Link Omada App on your mobile device. It can be downloaded from App Store or Google Play:

2. Connect your mobile device to the EAP by using the default SSID (format: TP-Link\_2.4GHz/5GHz\_XXXXXX) printed on the label at the bottom of the product.
3. Open the Omada App, and wait for the EAP to appear on the Standalone APs page. Tap on the EAP you want to configure.

#### Via Web Browser

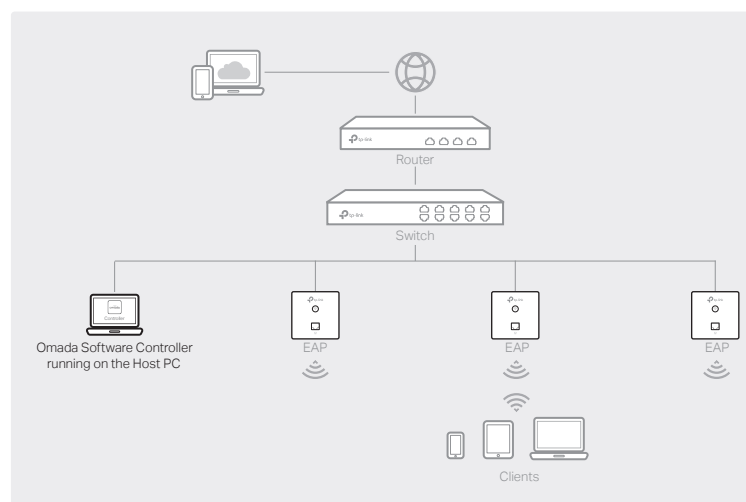

1. Connect wirelessly by using the default SSID (format: TP-Link\_2.4GHz/5GHz\_XXXXXX) printed on the label at the bottom of the product.
2. Launch a web browser and enter <http://tplinkeap.net> in the address bar. Use admin for both Username and Password to log in.
3. Set up a new Username and Password for secure management purpose. Modify the wireless parameters and reconnect your wireless devices to the new wireless network.

### Method 2: Controller Mode

Choose from the following two types of Omada Controller:

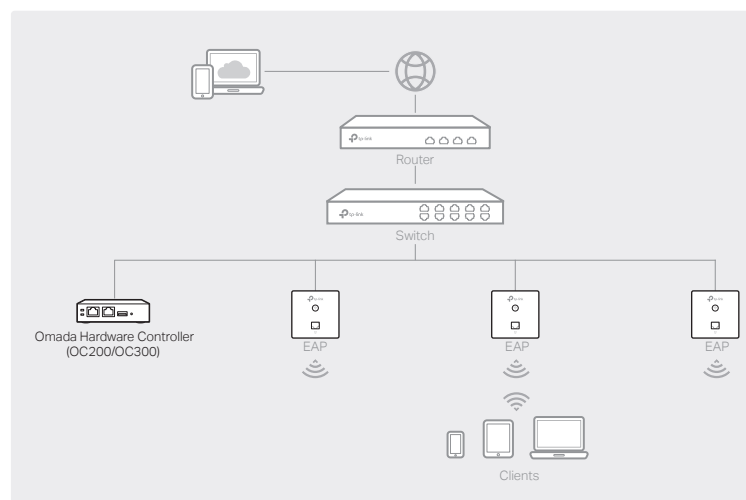

- **Type 1: Omada Software Controller**

On a PC with Windows OS or Linux OS, download the Omada Software Controller from <https://www.tp-link.com/support/download/omada-software-controller/>. Then run the file and follow the wizard to install and launch the Omada Software Controller. To manage your devices, Omada Software Controller needs to keep running on your computer.

- **Type 2: Omada Hardware Controller (OC200/OC300)**

Omada Hardware Controller (OC200/OC300) is a good alternative if you have no spare PC to keep running Omada Software Controller in the network. It needs to be purchased additionally. For more details, refer to the Installation Guide of OC200/OC300.

**Note:**

- Before you start, be sure to power up and connect your devices according to the topology figure.
- A DHCP server (typically a router with DHCP function enabled) is required to assign IP addresses to the EAPs and clients in your local network.
- Omada Controller must have network access to your Omada devices (the router, switch, and EAPs) in order to find, adopt, and manage them.

#### Via Omada App

1. Download the TP-Link Omada App on your mobile device. It can be downloaded from App Store or Google Play:

2. Launch your Omada App and configure the controller at a local site or remote site.

- Local Management

- a. Connect your mobile device to the EAP by using the default SSID (format: TP-Link\_2.4GHz/5GHz\_XXXXXX) printed on the label at the bottom of the product.
- b. Launch Omada App and go to Local Access, tap the + button on the upper-right corner to add the controller. Then you can further configure the controller.

- Remote Management

**Note:** Before you start, make sure that both your controller and mobile device can access the internet.

- \* For Omada Software Controller

- a. Make sure that Cloud Access is enabled on your controller and your controller has been bound with your TP-Link ID.
- b. Launch Omada App and log in with your TP-Link ID. Then go to Cloud Access. A list of controllers that have been bound with your TP-Link ID will appear. Then you can further configure the controller.

- \* For Omada Hardware Controller

- a. Make sure that Cloud Access is enabled on your controller. By default, Cloud Access is enabled. Make sure that the Cloud LED is flashing slowly.
- b. Launch Omada App and log in with your TP-Link ID. Then go to Cloud Access. Tap the + button on the upper-right to add your controller. Then you can further configure the controller.

#### Via Web Browser

1. Open the Omada Controller's web page.

- \* For Omada Software Controller

Launch the Omada Software Controller on your PC. After the initiation process, the controller automatically opens its web page. If not, click Launch a Browser to Manage the Network.

- \* For Omada Hardware Controller

As Omada Hardware Controller gets its IP address from the DHCP server of the router, we don't know its IP address explicitly. However, we can find it out on the router's DHCP client list.

- a. You need first find the IP address of the router. Open the command line on your PC and enter ipconfig. In the result list, find the Default Gateway, which is also the IP address of the router.
- b. Launch a web browser and enter the IP address of the router. Log into the router's web page, and both the username and password are admin by default. Then go to Network > LAN > DHCP Client List to find the IP address of your controller according to its MAC address.
- c. Enter the IP address of your controller in the address bar to open its web page.

2. On the Omada Controller's web page, follow the wizard to complete the quick setup.

3. After the quick setup, the login page appears. Enter the username and password you have created and click Log in. Then you can further configure the controller.

4. (For Remote Management) You can remotely access and manage your controller via Omada Cloud Service.

**Note:** Before you start, make sure that both your controller and your PC can access the internet.

- \* For Omada Software Controller: refer to its User Guide

- \* For Omada Hardware Controller

- a. Make sure that Cloud Access is enabled on your controller. By default, Cloud Access is enabled. Make sure that the Cloud LED is flashing slowly.
- b. Launch a web browser and enter <https://omada.tplinkcloud.com> in the address bar. Enter your TP-Link ID and password to log in. Click + Add Controller and choose Hardware Controller to add your controller. Then you can further configure the controller.

For the detailed configurations, refer to the User Guide of the controller and EAPs. The guides can be found on the download center of our official website: <https://www.tp-link.com/support/download/>.

**EAC** Safety Information

- Keep the device away from water, fire, humidity or hot environments.
- Do not attempt to disassemble, repair, or modify the device. If you need service, please contact us.
- Do not use the device where wireless devices are not allowed.
